

PROGRAMMED HOISTS

CONSTRUCTED FOR LONG LASTING PERFORMANCE

PROGRAMMED HOISTS:

Therma-Tron-X programmed hoists are custom designed for high up-time performance and built to serve a wide variety of industrial finishing processes. They can be integrated with multiple styles of conveyor systems. TTX hoists are designed to handle the heaviest workloads and are fabricated, programmed and tested before shipment.

TTX hoists are equipped with low maintenance, reliable components. To sustain a clean plant environment, process tanks are typically enclosed, venting vapors and odors to the atmosphere. Programmable logic controllers (PLCs) monitor hoist systems and make sure all operations meet exact specifications.

TTX can also provide custom designed bulk, rack and barrel systems for various bulk coating applications. Bulk loading and unloading equipment is also available.

Contact a TTX sales engineer to learn more.

BENEFITS:

TTX programmed hoists are designed with the process requirements in mind. Heavy-duty construction, long-lasting performance, digital locating system and full automation make TTX hoists hard to beat. Dependable PLCs with human machine interfaces (HMIs) make it easy to monitor every aspect of a system. In addition, hoists can connect with other plant processes to streamline production. Programmed hoists can be designed for automated storage and retrieval systems where there are high volume loads and densely racked parts.

SERVICE CAPABILITIES:

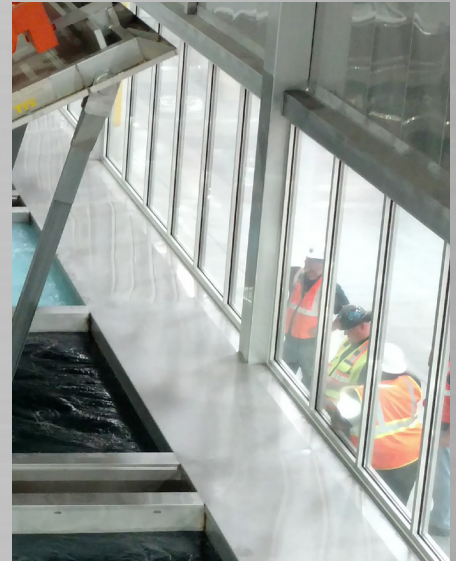

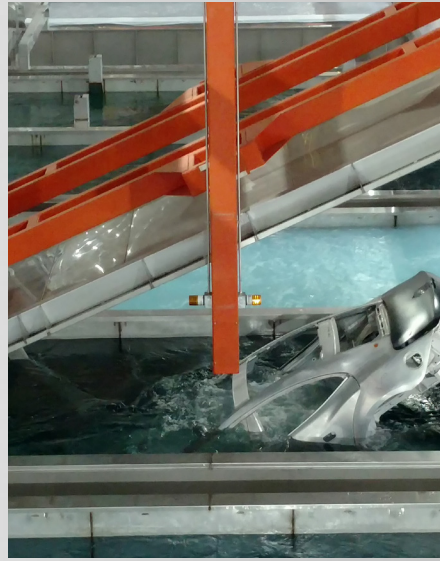

- Anodizing
- Rack or barrel electrocoating
- Dip coating
- Conversion coating
- Parts cleaning

TTX programmed hoists are custom designed for high up-time performance.

AVAILABLE FEATURES:

- Wireless control
- Absolute digital positioning
- Tilting and rotation capabilities
- No festoons
- Laser tracking
- In house programming and support
- Diagnostic services via VPN

PRACTICAL APPLICATIONS:

Variable speed lift and travel hoists from TTX are equipped to handle the heaviest workloads. Programmed hoist systems are ideal for applications involving large parts and low volumes or for products that require a variety of process times.

COST EFFECTIVENESS:

TTX is an industry leader in surface finishing systems that conserve energy. TTX programmers and engineers are committed to innovation. Programmed hoist systems are designed to maximize productivity, minimize waste and reduce labor costs.
